EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Brian Mancini on January 17, 2006.

2. The application has been amended as follows: replace claim 13 with the following:

13. (Currently amended) A method of reducing power variation in a communication system wherein data is transmitted over a plurality of subchannels, the method comprising the steps of:

generating information symbols[[],] ;

~~transmitting channel symbols on individual subchannels in a combined signal,~~

encoding said information symbols into higher order channel symbols at substantially the same symbol rate, the encoding of an individual information symbol as a channel symbol including a forward error correction scheme for the channel symbol and including selection of the channel symbol from a higher order channel symbol constellation comprising redundant channel symbol values by evaluating the power variation for all possible redundant channel symbol values for a combined signal of the plurality of subchannels and choosing the channel symbol value producing the lowest power variation for the combined signal[[],] ;

transmitting the channel symbols on individual subchannels in the combined signal; and

receiving the higher order channel symbols and regenerating the information symbols, characterized in that one channel symbol is generated for each information symbol, and

wherein the forward error correction scheme is applied independently on the individual subchannels.

3. The drawings were received on November 25, 2005. These drawings are acceptable.

4. The following is an examiner's statement of reasons for allowance: prior art of record does not teach or suggests in combination a system or method that encodes information into higher order channel symbols by including selection of the channel symbols from a higher order channel symbol constellation with redundant channel symbols by evaluation the power variation for all possible redundant channel symbols values for a combined signal of the plurality of subchannels and choosing the channel symbol value producing the lowest power variation for the combined signal, as recited in claim 1, lines 4-11 and claim 13, lines 6-13.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
